● Silver & Specialty Metals

Mexico, Nevada, and emerging assets

● Looking Ahead

Early 2026 watchlist

● Closing Perspective

The year of execution begins

EDITOR’S NOTE

January Opens the Year of Execution

January rarely delivers fireworks—and that’s precisely what made this month meaningful. As the first chapter of 2026 opened, mining and infrastructure companies across multiple jurisdictions entered the year with a noticeably disciplined posture. Instead of rushing to announce ambitious timelines or speculative milestones, January activity reflected preparation, follow-through, and technical grounding.

This month functioned as a checkpoint rather than a launchpad.

Across gold, copper, uranium, and infrastructure-linked assets, the dominant theme was execution readiness. Projects that spent much of late 2025 validating geological models, expanding systems, or strengthening operational frameworks began translating that groundwork into clearer next steps. The emphasis was not on speed, but on confidence—knowing where to advance, how to advance, and why the path forward made sense.

Gold exploration updates increasingly emphasized system-scale understanding. Rather than spotlighting isolated intercepts, companies focused on continuity, structural context, and broader mineralized envelopes. This approach reflects a maturing exploration mindset, one that prioritizes long-term potential over short-term headlines.

Copper narratives followed a similar pattern. Post-resource refinement, technical planning, and system consolidation dominated January messaging. These updates reinforced copper’s long-cycle relevance, especially as electrification, infrastructure renewal, and grid expansion remain central to global economic planning.

In uranium, consistency was the signal. Repeated ISR-aligned results and methodical advancement reinforced confidence in U.S.-based projects, highlighting predictability as a competitive advantage in a sector increasingly tied to energy security and domestic supply strategies.

Perhaps most notably, January continued to blur the line between mining and infrastructure. Power access, modular deployment, AI compute readiness, and industrial land positioning moved further into the foreground. These assets are no longer peripheral—they are becoming foundational to how value is created, scaled, and communicated.

January didn’t redefine the cycle.

It clarified who was ready to move within it.

As the year unfolds, the projects gaining traction will likely be those that used this quiet month to align teams, tighten strategies, and reduce uncertainty. January was not about acceleration—it was about alignment.

JANUARY HIGHLIGHTS

Five Moves That Defined the Opening Month

AI INFRASTRUCTURE | DEPLOYMENT PHASE

Digi Power X — ARMS 200 Progress

January updates confirmed continued movement from planning into deployment, with modular AI infrastructure, power alignment, and strategic partnerships reinforcing execution readiness heading into 2026.

GOLD | SYSTEM REFINEMENT

Arizona Gold & Silver — Philadelphia Project

January drilling and technical work further refined structural continuity and system geometry, reinforcing a broader exploration framework rather than isolated vein targeting.

COPPER | POST-RESOURCE FOCUS

Kodiak Copper — MPD Project

Following the maiden resource milestone, January activity centered on technical refinement and planning, sharpening the project’s pathway toward next-stage advancement.

URANIUM | EXECUTION DISCIPLINE

Noble Plains Uranium — Duck Creek

Multiple January updates highlighted consistency and alignment with ISR models, reinforcing confidence in predictable execution rather than expansion-driven narratives.

DISTRICT SCALE | EXPANSION

Arras Minerals — Elemes Project

January work continued advancing district-scale understanding, with porphyry-style targets and regional context strengthening the broader Elemes exploration story.

The strongest stories this month weren’t the loudest — they were the most prepared.

DIGI POWER X DIGIPOWER X

When Infrastructure Moves From Concept to Deployment

January marked a turning point for Digi Power X as infrastructure planning translated into tangible execution. Updates this month emphasized deployment readiness, power alignment, and strategic positioning rather than conceptual ambition. The company’s focus on modular systems, energy access, and partnerships reflects a broader shift toward building scalable, execution-ready platforms designed to meet accelerating AI and high-performance compute demand.

WHY JANUARY MATTERED

From Planning to Physical Build

January communications centered on tangible progress—deployment sequencing, infrastructure readiness, and system integration—signaling a clear transition from planning frameworks into execution stages.

Power as the Anchor Asset

Consistent emphasis on power availability underscored its role as the primary constraint—and competitive advantage—in scaling AI and data-center infrastructure efficiently.

THE EXECUTION STACK

Modular Deployment Strategy

Containerized, scalable systems enable phased rollout, faster timelines, and flexible expansion compared with traditional hyperscale builds.

Strategic Partnerships

January updates highlighted collaborative structures designed to accelerate deployment, optimize power usage, and align technical execution.

Execution Discipline

The company’s messaging prioritized readiness, delivery sequencing, and infrastructure integration over speculative growth narratives.

ARIZONA GOLD & SILVER

January Drilling Sharpens the Philadelphia System

January updates from Arizona Gold & Silver continued refining the geological understanding of the Philadelphia Project. Rather than reframing the story, January work strengthened it—adding clarity around structure, continuity, and system geometry. The focus remained on disciplined drilling, interpretation, and model validation, reinforcing a broader system-scale view rather than narrow, intercept-driven exploration.

WHAT JANUARY ADDED

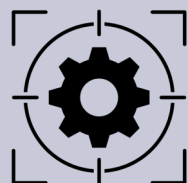

Structural Continuity

January drilling and analysis supported consistent mineralization along established structures, strengthening confidence in continuity across the Philadelphia system.

System Geometry

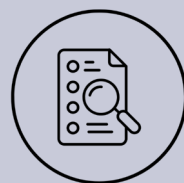

Updated interpretations improved understanding of how mineralization extends beyond individual veins, reinforcing the project's broader exploration framework.

JANUARY EXPLORATION FRAMEWORK

Targeting Discipline

Drilling priorities remained aligned with structural controls and geological models developed through earlier campaigns.

Model Refinement

January data contributed incremental clarity, helping reduce uncertainty around mineralized zones and their spatial relationships.

Scalable Potential

The evolving system-scale interpretation supports a longer-term exploration pathway rather than short-cycle drilling narratives.

KODIAK COPPER

January Focus: What Comes After the Resource

January marked a period of consolidation for Kodiak Copper following its recent resource milestone at the MPD copper–gold project. Rather than introducing new narratives, January updates emphasized technical review, interpretation, and planning. The focus moved toward understanding scale, refining development pathways, and aligning future work programs with the project's emerging size and structure. This phase reflects a deliberate transition from discovery-driven momentum to definition-led advancement.

WHY JANUARY MATTERED

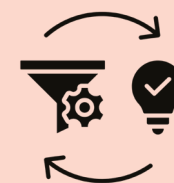

From Milestone to Method

With a resource now defined, January activity centered on absorbing data, refining assumptions, and preparing for the next technical steps.

Scale Comes Into Focus

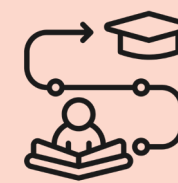

The MPD system continues to be viewed through a district-scale lens, where understanding extent and continuity matters more than short-term expansion.

POST-RESOURCE PRIORITIES

Technical Refinement

January work emphasized internal review of geological, structural, and resource data to support informed next-phase decisions.

Development Pathway

Efforts focused on clarifying how the project progresses logically beyond its current stage without forcing time-lines.

Strategic Patience

Kodiak's January posture reflected restraint—allowing the project's scale and data to guide advancement rather than market pressure.

NOBLE PLAINS URANIUM

January Reinforced Confidence in ISR Execution

January updates from Noble Plains Uranium underscored a consistent, execution-led approach at the Duck Creek Project. Rather than pivoting strategy, the company continued validating assumptions around ISR-style mineralization and operational readiness. The month’s disclosures emphasized alignment between geological models and field results, reinforcing predictability as a competitive advantage. This steady progression reflects a focus on disciplined advancement within a sector increasingly defined by reliability and domestic supply relevance.

WHAT STOOD OUT IN JANUARY

Model Alignment

January work continued supporting roll-front interpretations, strengthening confidence in ISR suitability and geological consistency.

Repeatability Matters

Progress was measured through consistency rather than step-change announcements, reinforcing execution credibility.

ISR EXECUTION FRAMEWORK

Geological Validation

January data aligned with existing interpretations, reducing uncertainty around mineralization style and continuity.

Operational Discipline

Activities reflected a structured approach, prioritizing accuracy, sequencing, and preparedness over aggressive expansion.

Project Readiness

The focus remained on building a technically sound platform capable of supporting future development decisions.

ARRAS MINERALS

January Work Extends the District-Scale Narrative

January updates from Arras Minerals continued strengthening the geological framework at the Elemes Project in Kazakhstan. Rather than repositioning the story, January work added depth—extending understanding of porphyry-style mineralization and reinforcing district-scale potential. The focus remained on geological continuity, target expansion, and refining the broader system context. This measured approach reflects an emphasis on building a technically coherent exploration story before accelerating activity.

WHAT JANUARY CONFIRMED

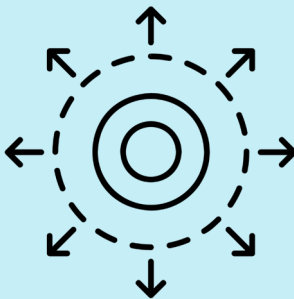

Porphyry-Style Continuity

January results supported the interpretation of a large, coherent porphyry system rather than isolated targets.

District Perspective

Work continued framing Elemes as a multi-target district opportunity, expanding context beyond individual prospects.

EXPLORATION DIRECTION — JANUARY VIEW

Target Expansion

January activity contributed to identifying additional zones within the broader mineralized footprint.

Geological Confidence

Incremental data improved confidence in system geometry, scale, and mineralization style.

Disciplined Advancement

The company maintained a stepwise approach, prioritizing understanding over rapid expansion.

January Progress Refines Nevada Exploration Focus

January updates from Phenom Resources emphasized steady advancement across its Nevada portfolio, with work centered on geological refinement and target validation. Rather than introducing new exploration narratives, January activity strengthened existing interpretations—helping clarify structure, alteration patterns, and system potential. This disciplined approach reflects an emphasis on building confidence through methodical work, positioning projects for more efficient follow-up as exploration priorities sharpen through early 2026.

WHAT JANUARY ADVANCED

Target Definition

January work contributed to refining priority targets, helping distinguish higher-confidence zones within broader prospective areas.

Geological Context

Continued interpretation improved understanding of structural controls and mineralization styles across key project areas.

NEVADA EXPLORATION FRAMEWORK

System Understanding

Efforts focused on recognizing how mineralization fits within larger geological systems rather than isolated anomalies.

Data-Driven Progress

January updates reflected a preference for measured, evidence-based advancement over accelerated exploration pacing.

Strategic Optionality

Maintaining flexibility allows future programs to scale appropriately as geological understanding continues improving.

January Work Deepens Structural Understanding at Elora

January updates from Dryden Gold continued advancing the Elora Gold Trend through focused geological work. Rather than accelerating drilling, January activity concentrated on refining structural interpretations and confirming system continuity. This work strengthened confidence in Elora's broader potential, helping define priority zones and guiding future exploration planning. The emphasis remained on building a solid geological foundation before transitioning into more intensive exploration phases.

WHAT JANUARY CLARIFIED

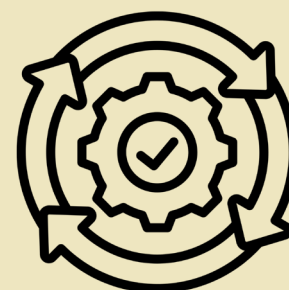

Structural Controls

January analysis improved understanding of fault orientations and their relationship to gold mineralization along the trend.

System Continuity

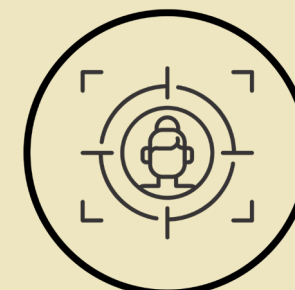

Results supported the interpretation of a continuous mineralized system rather than isolated occurrences.

ELORA TREND — EXPLORATION FRAMEWORK

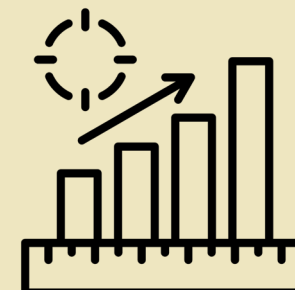

Geological Refinement

January work focused on tightening interpretations, reducing uncertainty around mineralized structures.

Target Prioritization

Improved clarity helped identify zones with stronger potential for future drilling programs.

Measured Advancement

Progress reflected disciplined pacing, prioritizing understanding over rapid exploration expansion.

From 2025 Foundations to a 2026

Exploration Reset

January updates from Loyalist Exploration framed a transition point—closing out 2025 while setting priorities for the year ahead. Rather than introducing new exploration noise, the company focused on consolidation, strategic clarity, and positioning within proven Canadian gold districts. This measured reset reflects an intent to advance with purpose in 2026, using lessons, data, and groundwork from the prior year to guide more efficient exploration decisions.

WHAT JANUARY HIGHLIGHTED

Strategic Reflection

The company used January to assess progress, refine objectives, and align exploration strategy with long-term goals.

District-Focused Positioning

Continued emphasis on established mining jurisdictions supports disciplined, lower-risk exploration planning.

LOOKING AHEAD — 2026 FRAMEWORK

Priority Alignment

January updates clarified how assets and exploration plans fit within a focused, streamlined portfolio.

Capital Discipline

The approach reflects measured planning, balancing opportunity with realistic execution capacity.

Execution Readiness

Foundational work completed in 2025 supports a more decisive operational posture moving into 2026.

January Progress Strengthens

Confidence in the Madsen Revival

January updates from West Red Lake Gold reinforced steady progress at the Madsen Gold Project in Ontario’s Red Lake district. Rather than reframing objectives, January work focused on advancing technical understanding and operational readiness. The company’s approach emphasized continuity, confidence in existing data, and preparation for future development steps. This measured progression highlights how incremental work can meaningfully de-risk projects moving toward more advanced stages.

WHAT JANUARY CONFIRMED

Operational Focus

January activity reflected increasing attention on development considerations alongside ongoing technical work.

Data Confidence

Continued reliance on existing geological and operational datasets supported consistent project planning.

PROJECT DIRECTION — JANUARY VIEW

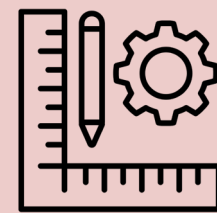

Execution Alignment

Work programs remained aligned with longer-term development objectives over short-term exploration cycles.

Risk Reduction

Work programs remained aligned with longer-term development objectives over short-term exploration cycles.

Measured Advancement

The company maintained a disciplined pace, prioritizing readiness and stability over rapid acceleration.

January Activity Highlights Strategic Metal Exposure

January updates from Power Metallic reflected continued focus on positioning within specialty and critical metals. Rather than emphasizing short-term milestones, the company’s January communications highlighted strategic alignment, portfolio relevance, and disciplined advancement. This approach underscores the growing importance of specialty metals in energy transition and industrial applications, where long-term demand visibility often matters more than near-term exploration intensity.

WHAT JANUARY REINFORCED

Portfolio Relevance

January updates underscored the strategic importance of Power Metallic’s asset base within evolving industrial and energy markets.

Measured Progress

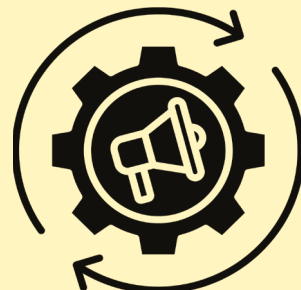

Activity reflected steady advancement without overextension, preserving flexibility as market dynamics continue evolving.

STRATEGIC METALS FRAMEWORK

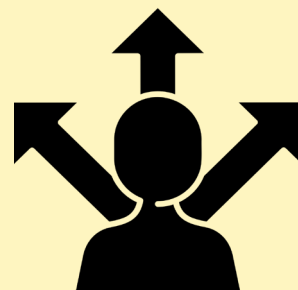

Long-Term Alignment

The company continues aligning its portfolio with metals supporting electrification and advanced manufacturing.

Risk-Aware Advancement

January progress emphasized disciplined decision-making and selective capital deployment.

Optionality Preservation

Maintaining flexibility allows future development pathways to adjust as demand patterns evolve.

January Emphasized Stability Across Producing Assets

January updates from Guanajuato Silver highlighted continued operational focus across its Mexican silver assets. Rather than signaling major strategic shifts, January communications emphasized stability, asset management, and disciplined execution. This steady posture reflects the company’s intent to strengthen operational foundations while navigating a silver market that increasingly rewards reliability, consistency, and cost awareness alongside exploration upside.

WHAT JANUARY CONFIRMED

Operational Continuity

January activity underscored consistent operational management across producing and near-producing assets.

Asset Familiarity

Ongoing work reflected a deepening understanding of mine systems, supporting informed operational decision-making.

SILVER OPERATIONS FRAMEWORK

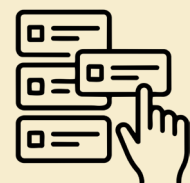

Stability First

Operational decisions prioritized continuity, reliability, and disciplined risk management across core silver operations.

Measured Optimization

January efforts focused on incremental improvements, avoiding disruptive operational changes while maintaining stability.

Optional Growth

Exploration and development remain available as upside, supported by stable operational footing foundation.

MINING DISCOVERY: WHERE DATA DRIVES DECISIONS

Mining Discovery delivers verified global mining intelligence across gold, silver, copper, uranium, energy, and digital mining—tracking scale, execution, infrastructure, and market signals that shape real outcomes.

- Global mining news, verified insights
- Gold, copper, silver, uranium coverage
- Infrastructure and Bitcoin mining trends
- Execution-focused analysis, not speculation

JANUARY METRICS & DATA

How Activity Distributed Across the Sector

January activity reflected a disciplined start to 2026, with companies prioritizing execution, validation, and operational positioning rather than volume-driven announcements or speculative momentum across mining and infrastructure-linked sectors.

The data captures where activity concentrated geographically, which project stages dominated disclosures, and what themes shaped January communications, highlighting a sector focused on readiness, clarity, and system-scale advancement rather than acceleration.

Theme	Strength
Execution & Readiness	Strong
Geological Validation	Strong
System-Scale Interpretation	High
Infrastructure Integration	Emerging
Speculative Exploration	Low

DATA TAKEAWAY

January activity favored clarity, execution, and readiness over speed or speculation.

GLOBAL EXPLORATION MAP

Geographic Concentration

January exploration activity concentrated in jurisdictions with established infrastructure, regulatory clarity, and proven geology. Rather than expanding geographically, companies focused on deepening work within known districts, prioritizing execution efficiency, data quality, and development readiness across core regions.

Strategic Positioning

This geographic focus reflects a broader strategic shift. Companies aligned exploration and development programs where power access, permitting certainty, and historical success reduce risk, reinforcing a disciplined approach to capital deployment and early-cycle execution.

PRIMARY ACTIVITY SIGNALS

Jurisdictional Confidence	District Focus	Execution Alignment	Infrastructure Influence
Activity favored politically stable regions with clear mining frameworks.	Exploration deepened within established camps rather than frontier expansion.	Geography mirrored where projects were closest to advancement.	Power and land access increasingly shaped exploration prioritization.

REGIONAL SNAPSHOT POINTS

Canada Focus

Gold and copper projects advanced within proven mining districts.

United States Focus

Uranium, gold, and infrastructure-linked assets dominated activity.

Mexico Presence

Silver operations emphasized stability and optimization.

Central Asia Selectivity

Copper exploration targeted district-scale systems only.

Global Restraint

Limited activity outside core jurisdictions reflected disciplined positioning.

JANUARY MARKET READ

A Sector Snapshot in Motion

Main Narrative

January’s market behavior reflected a sector settling into execution mode. Across mining and infrastructure, credibility replaced urgency as the dominant currency. Companies with defined systems, realistic pacing, and operational readiness gained attention, while speculative narratives faded into the background. Rather than chasing early momentum, January participants appeared focused on positioning—aligning assets, teams, and strategies for steady progress through the first half of 2026.

WHAT STOOD OUT MOST

What Gained Traction

- Execution-focused updates
- Repeatable results
- Infrastructure-backed strategies

What Lost Attention

- Speculative expansion
- Overextended timelines
- Isolated, low-context results

THE JANUARY CHECKLIST

- ✔ Clear Project Direction
- ✔ System-Scale Visibility
- ✔ Operational Readiness
- ✔ Measured Timelines
- ✔ Infrastructure Awareness

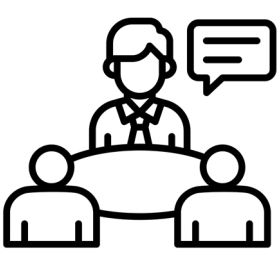

Sector	January Sentiment
Gold	Stable
Copper	Constructive
Uranium	Strong
Silver	Balanced
Infrastructure	Rising

CORPORATE MOVES

How Companies Set the Table for the Year

January corporate activity focused less on headline-making transactions and more on structural readiness. Leadership updates, strategic partnerships, and positioning moves reflected a preference for alignment over acceleration. These decisions, while quieter than financings or acquisitions, play a critical role in shaping execution capacity and credibility as projects advance through 2026.

KEY MOVES THAT MATTERED

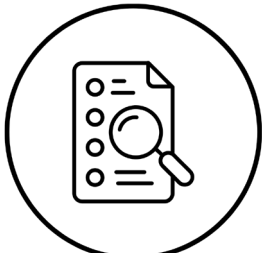

Leadership Alignment

Companies emphasized experienced leadership and internal role clarity to support disciplined execution.

Strategic Partnerships

Collaborations announced in January focused on capability, access, and execution support rather than short-term visibility.

Portfolio Focus

January updates reflected selective prioritization—refining asset focus instead of expanding footprints.

Operational Readiness

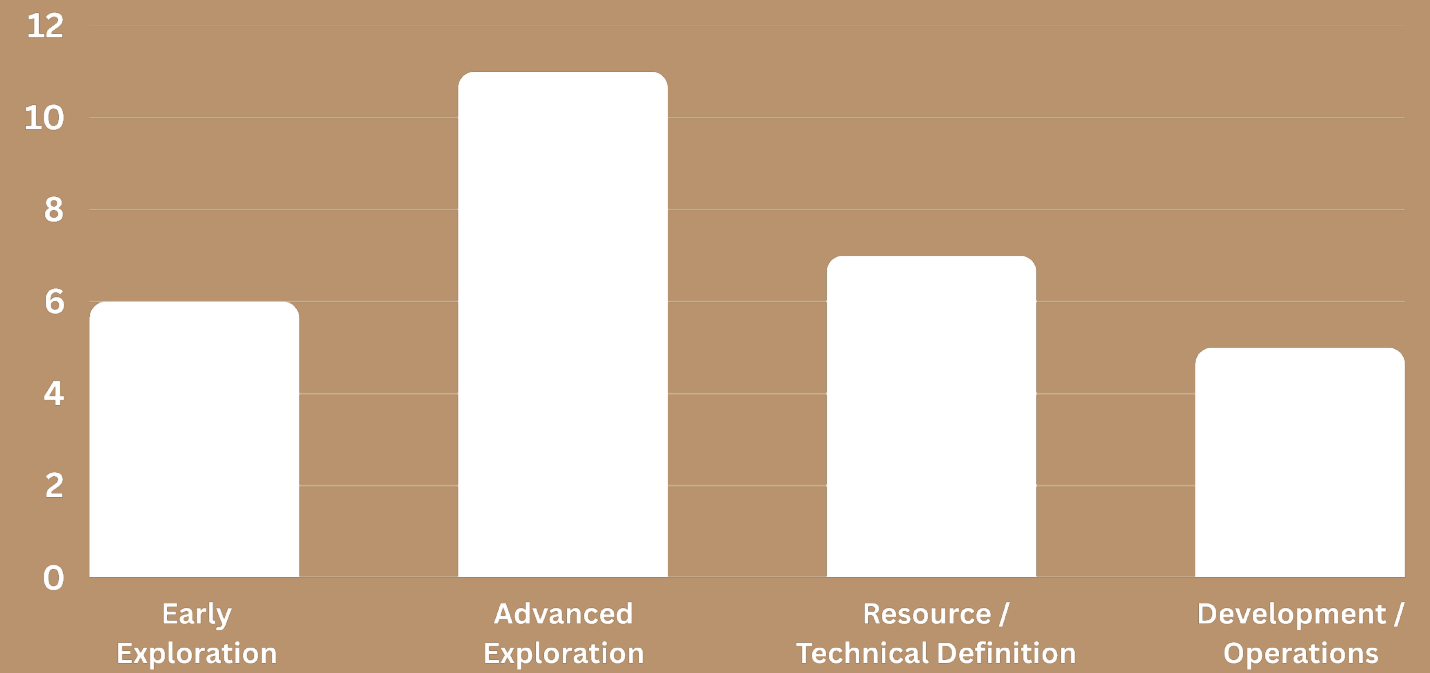

Corporate decisions increasingly aligned with project-stage realities and near-term execution needs.

WHY THESE MOVES MATTER

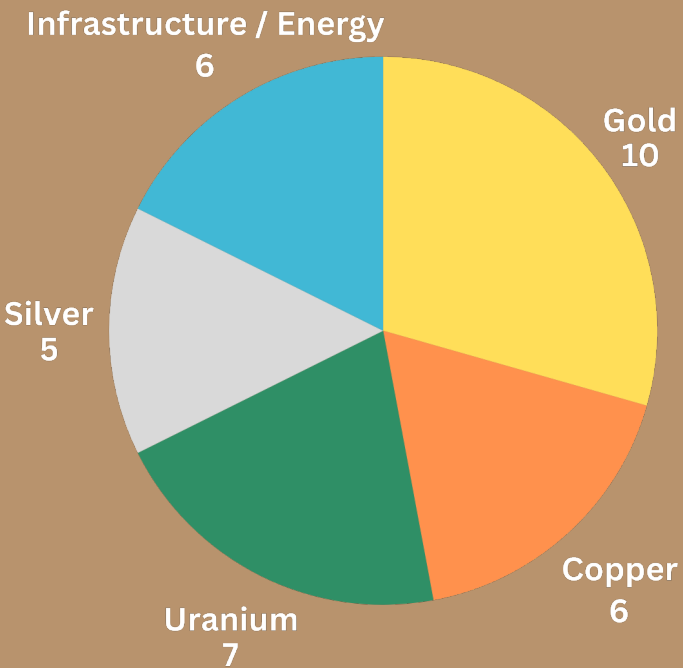

- Leadership stability supports consistent decision-making.
- Partnerships reduce friction in deployment and development.
- Focused portfolios improve capital efficiency.
- Readiness-driven strategy lowers execution risk.

JANUARY DATA SNAPSHOT

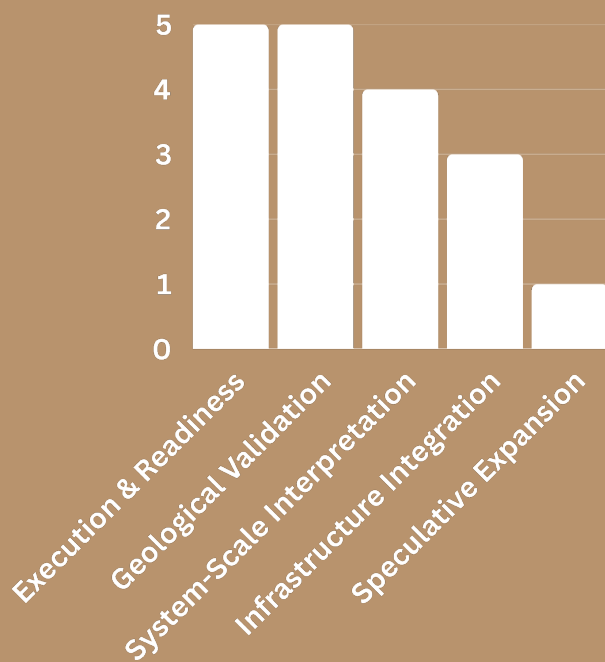

PRIMARY ACTIVITY ZONES

January activity concentrated in advanced exploration and technical definition stages.

Gold led January activity, while uranium and infrastructure gained relative strength.

Execution-focused themes clearly outweighed speculative narratives in January.

GEOGRAPHIC ACTIVITY DISTRIBUTION

North America Dominance

Canada and the United States accounted for the majority of January activity, reinforcing their role as the sector’s most active and execution-ready jurisdictions.

U.S. Activity Strength

The United States led individual country activity, driven by uranium, infrastructure, and gold-focused project updates.

Canada’s Exploration Core

Canada remained a central hub for gold and copper exploration, supported by established mining districts and regulatory clarity.

Mexico’s Targeted Presence

January activity in Mexico focused primarily on silver operations, emphasizing stability and operational continuity rather than expansion.

Selective International Exposure

Limited activity outside North America reflected disciplined capital allocation and a preference for proven geological and regulatory environments.

GLOBAL THEMES & SIGNALS

Sector-Wide Updates at a Glance

UPDATE GRID — JANUARY SIGNALS

• **Execution Took Priority**

January updates emphasized delivery, sequencing, and readiness rather than accelerated expansion.

• **System-Scale Exploration Dominated**

Companies highlighted continuity, structure, and broader mineralized systems over isolated drill results.

• **Advanced Exploration Led Activity**

Most disclosures clustered around advanced exploration and technical definition stages.

• **Infrastructure Became Central**

Power access, modular deployment, and land readiness featured prominently in January narratives.

• **Repeatability Gained Importance**

Consistent results aligned with models strengthened project credibility across commodities.

• **Jurisdictional Focus Narrowed**

Activity concentrated in mining-proven, infrastructure-ready regions rather than frontier jurisdictions.

IMPORTANT SIGNALS — WHAT MATTERED MOST

Preparation Over Acceleration

January functioned as a positioning month. Companies focused on refining plans, validating assumptions, and aligning teams before increasing operational intensity later in 2026.

Credibility Became the Filter

Projects demonstrating clarity, consistency, and execution discipline attracted more attention than speculative or narrative-driven updates.

Infrastructure as a Value Driver

Energy access and deployment readiness emerged as strategic advantages, increasingly shaping how project value is perceived and communicated.

Q1 STARTING POSITION

Where January Left the Sector

THE JANUARY → Q1 TRANSITION

January → Alignment → Readiness → Early Q1 Execution

January functioned as the alignment phase, setting conditions for visible progress.

JANUARY SNAPSHOT

January activity emphasized discipline over acceleration. Companies across mining and infrastructure refined plans, validated systems, and aligned execution pathways. Rather than pushing outward, the sector focused inward—reducing uncertainty and strengthening foundations for early 2026 advancement.

WHAT Q1 REWARDS

-  **Prepared Projects**
Clear plans and execution readiness gain momentum.
-  **System-Level Stories**
Continuity and scale outperform isolated results.
-  **Infrastructure-Backed Assets**
Power and deployment access create strategic advantage.
-  **Measured Expansion**
Selective growth beats broad exploration.

CLOSING PERSPECTIVE

How Strong Mining Years Actually Begin

THE REAL SHIFT

Mining cycles don't announce themselves with noise. They surface through better questions, clearer plans, and quieter confidence.

January 2026 did not arrive with urgency. It arrived with intent. Across commodities and jurisdictions, companies entered the year focused on structure rather than speed. Exploration programs showed restraint.

Development plans reflected realism. Infrastructure was no longer treated as secondary.

WHAT CHANGED

What stood out in January was not volume, but coherence. Geological models became more refined. Execution paths grew clearer. Fewer promises were made — and more assumptions were tested.

Mining doesn't gain momentum through acceleration alone. It gains momentum when geology, capital, leadership, and infrastructure begin aligning. January suggested that alignment is already underway, quietly reshaping how progress will unfold through 2026.

WHY IT MATTERS

The strongest years in mining are rarely explosive at the start.

They are cumulative.

They build through consistency, discipline, and decisions that reduce risk before expanding ambition. January functioned as that first layer — subtle, deliberate, and foundational.

This is how durable progress begins.

THE FRAMEWORK

Four Pillars Defining 2026

- Clarity**
Projects grounded in coherent geological and operational understanding.
- Discipline**
Measured pacing, realistic execution paths, and reduced uncertainty.
- Infrastructure**
Power, land, and deployment readiness as core value drivers.
- Consistency**
Repeatable outcomes building credibility over time.

JOIN THE GLOBAL MINING COMMUNITY AT IMARC 2026!

Unlock new opportunities in mining, energy, and resources at IMARC 2026. This premier event will bring together industry leaders, innovators, and investors for three days of networking, knowledge-sharing, and groundbreaking discussions.

DATE: NOVEMBER 12-14, 2026
LOCATION: MELBOURNE, AUSTRALIA

- Connect with global mining professionals
- Explore cutting-edge technologies and solutions
- Gain insights from industry experts
- Drive investment and business growth

DON'T MISS OUT ON THE MINING EVENT OF THE YEAR!

MINING DISCOVERY: FEBRUARY 2026 EDITION

YOUR GUIDE TO THE FUTURE OF MINING AND INFRASTRUCTURE

Get the latest updates in the world of mining with Mining Discovery Magazine. February's edition covers everything from gold, silver, and copper to critical minerals, uranium, and bitcoin mining. Featuring the key projects, trends, and expert opinions shaping the future of global mining.

Key Features:

- Market trends in gold, copper, silver, and uranium
- Infrastructure updates shaping the future of mining-grade assets
- District-focused exploration and strategic project positioning

Read the February issue for expert insights into emerging technologies, investment opportunities, and the future of mining.
