CK Gold Gains Momentum

Strategic Land Acquisition (Nov 5)

U.S. Gold Corp expanded its CK Gold development footprint on November 5 by securing a 10-acre Cheyenne parcel. The site will support workforce staging, reduce traffic impact, and provide long-term operational flexibility, directly strengthening infrastructure ahead of the project’s planned 2026 construction start.

Global Investor Engagement (Nov 13)

During the 121 Mining Investment Conference in London, company leadership spent two full days meeting investors, presenting CK Gold’s strong economics, advanced permitting status, and clear development pathway, reinforcing growing international interest in the project’s near-term production potential.

Industry Positioning (Nov 6)

On November 6 at the Curzio One Wealth Conference, U.S. Gold Corp emphasized CK Gold’s role as a near-term U.S. copper-gold producer. Leadership highlighted its solid PFS foundation, fully permitted status, and strategic relevance as domestic metals demand grows across clean-energy and industrial sectors.

Project Snapshot — CK Gold

Advanced-stage gold–copper project

Positioned as one of the most development-ready gold–copper assets in the U.S., supported by consistent technical results and strong project fundamentals.

Fully permitted with a strong PFS base

All key permits are secured, and the project’s PFS outlines attractive economics, solid recoveries, and a clear pathway to development.

Construction targeted for 2026

With approvals and technical groundwork in place, CK Gold is scheduled to transition from planning to active construction in 2026.

Multiple supporting properties secured

Recent acquisitions, including November’s 10-acre Cheyenne parcel, enhance logistics, workforce management, and long-term operational flexibility.

Why CK Gold Matters Right Now

A Near-Term U.S. Metals Producer

CK Gold stands out in the American mining landscape as a project that’s both fully permitted and backed by a strong PFS, positioning it for construction in 2026. While many projects are still chasing approvals, CK Gold is one of the few advanced-stage assets with a clear pathway.

Strategic Land Control Expands

November’s acquisition of a 10-acre Cheyenne property strengthens project logistics. The site will support workforce movement, reduce local traffic impact, and later transition into administrative operations — showing early attention to community and infrastructure planning.

Global Attention in London

At the 121 Mining Investment Conference, the company highlighted CK Gold’s role as a reliable domestic copper-gold pipeline, just as U.S. supply chains push to reduce foreign dependence. Investor response was notably strong.

U.S. Momentum

In Florida, leadership reinforced CK Gold’s value as a shovel-ready, U.S.-based clean-energy metals provider — a message that resonates deeply with current market trends.

Quick Project Features

Strong Economics & Full Permitting

CK Gold benefits from a solid PFS with strong gold-copper economics and already holds key permits, placing it ahead of most U.S. development-stage projects.

Strategic Land & Infrastructure Secured

With multiple support properties acquired, including November’s 10-acre Cheyenne site, the project has the groundwork set for workforce movement, logistics, and future operations.

Construction-Ready for 2026

With permitting, land control, and technical work aligned, CK Gold is positioned to transition into construction in 2026, marking its shift toward near-term U.S. production.

CHAIRMAN SPOTLIGHT

Luke Norman

Steering U.S. Gold Corp Through a Defining Phase

Leadership in Motion

November placed Luke Norman at the center of U.S. Gold Corp’s momentum, guiding the company through strategic land expansion, investor outreach, and positioning CK Gold as a near-term U.S. metals producer.

Driving CK Gold Forward

Norman’s focus remains clear: strengthen the project’s path toward its 2026 construction start, maintain transparent communication with investors, and build confidence in CK Gold’s long-term value as a domestic copper-gold source.

Investor Engagement

Through November’s conferences in London and Florida, Norman reinforced the project’s strong economics and permitting advantages, highlighting CK Gold as one of the few advanced-stage U.S. projects with a clean runway toward development.

Why His Role Matters Now

With the U.S. pushing for local supply of critical and battery metals, Norman’s ability to align strategy, permitting progress, and stakeholder trust places U.S. Gold Corp in a strong competitive position heading into 2026.

ARIZONA GOLD & SILVER

Perry Vein Delivers a Standout November Drill Hit

Major November Intercept (Nov 5)

Arizona Gold & Silver's November drill hole PC25-157 cut 34.45 metres of continuous Perry Vein material, 60 metres north of previous high-grade hits, confirming meaningful strike extension and reinforcing confidence in the system's scale.

Geological Consistency

The intercept displays three familiar facies — bladed calcite, quartz veining, and breccia — all matching earlier high-grade zones, indicating strong geological continuity and supporting the structural model guiding current and future drilling.

System Remains Open

Results suggest the Perry Vein continues both northward and at depth, keeping the system fully open for expansion and widening the exploration footprint, offering additional opportunities for future drilling to chase further mineralized extensions.

Project Snapshot — Perry Vein

34.45m of continuous vein material

November's standout intercept in hole PC25-157 confirmed a long, uninterrupted section of mineralized quartz-calcite veining, strengthening the structural model.

Consistent geology across multiple facies

Bladed calcite, quartz veining, and breccia textures all match earlier high-grade zones, suggesting a well-developed epithermal system with strong internal continuity.

Northward extension confirmed

The intercept lies 60m north of previous drilling, proving the vein continues along strike and remains open for further expansion.

Growing exploration footprint

November's results widen the target area, supporting the possibility of a larger, more continuous mineralized structure than previously defined.

CEO SPOTLIGHT

November marked a pivotal month for Arizona Gold & Silver, and much of that momentum reflects the steady direction of CEO Mike Stark. His leadership has been instrumental in steering exploration strategy, refining geological targeting, and ensuring disciplined expansion of the Perry Vein system. This month’s breakthrough results highlight the impact of his focused, method-driven approach.

A Steady Hand Behind the Perry Vein’s Momentum

November’s drilling results showcased more than geological success — they highlighted Mike Stark’s focused leadership style. Stark has pushed for disciplined targeting, tighter structural modeling, and step-out drilling designed to test the true scale of the Perry Vein system. The 34.45m intercept confirmed not only continuity, but also the effectiveness of the exploration strategy his team has refined over the past year.

Mike Stark
President, CEO, and Director of
Arizona Gold & Silver

Guiding Technical Confidence

Stark emphasizes that the November hit wasn’t luck — it was alignment between the geological model, experience in the district, and calculated risk-taking.

*“Every intercept like this sharpens our understanding of the system,” he notes.
“The consistency we’re seeing gives us real confidence in the vein’s long-term potential.”*

Positioning for the Next Phase

With the Perry Vein now extended 60m north, Stark is preparing the team for follow-up drilling aimed at testing deeper structures and potential higher-grade pockets.

*“We’re just beginning to understand how far this vein can run,” he adds.
“The November results give us the green light to push the system further.”*

Why Stark’s Approach Matters

His steady, technically grounded leadership ensures the project advances responsibly while still aiming for meaningful discovery — a balance that resonates strongly with both investors and the exploration team.

LOYALIST EXPLORATION

Gold Rush Property Delivers Strong Surface Result

High-Grade November Sampling

Loyalist Exploration reported impressive grab samples from its Gold Rush Property, including 7.36 g/t Au with 31 g/t Ag and 2.93 g/t Au with 14.3 g/t Ag, collected during a focused site visit.

150m Mineralized Trend Identified

November sampling confirmed gold-silver mineralization across roughly 150 metres, suggesting a broader system than previously mapped.

Early-Stage but Promising

Although preliminary, the results point to strong potential for follow-up trenching and drilling to define continuity and structure.

Project Snapshot: Gold Rush

- Multiple high-grade gold-silver samples
- Mineralization traced along 150m trend
- Strong early indicators for future drilling
- Demonstrates potential for a larger structural zone

Elora Trend Strengthens Through November Field Work

November Exploration Update

Dryden Gold advanced the Elora Gold Trend through November mapping, structural analysis, and follow-up sampling. This work refined the geological model, improved understanding of mineralized trends, and broadened the interpreted footprint of the emerging gold-bearing system.

Growing Structural Understanding

Field teams identified multiple parallel gold-bearing structures along the Elora Trend, reinforcing the presence of a more extensive mineralized system. These structures indicate potential for several mineralized shoots, offering stronger direction for future exploration and drilling.

Early-Stage but High-Potential Zone

Though early in its exploration timeline, November's results increased confidence in the Elora Trend's scale and continuity. New structural insights defined priority targets for upcoming field seasons and future drilling programs.

Project Snapshot — Elora Trend

Structural mapping improved continuity across the target area
November's detailed mapping connected previously isolated mineralized zones, revealing clearer structural patterns and improving confidence in strike continuity along the Elora Trend.

New geological insights strengthen long-term exploration potential
Updated interpretations identified multiple parallel structures and additional alteration zones, suggesting the broader system may host several gold-bearing shoots with room for significant expansion.

Refined priority zones for next-phase drilling and sampling
Based on November findings, Dryden Gold outlined new high-priority targets for future drilling, focusing on areas showing stronger structural preparation and enhanced gold-bearing potential.

November work expands confidence in regional scale
The month's fieldwork reinforced the possibility that the Elora Trend extends farther than previously mapped, elevating its potential as a growing regional gold system.

CEO SPOTLIGHT

Dryden Gold’s leadership played a crucial role in shaping November’s progress across the Elora Trend. With the project still in its early stages, management focused on refining structural interpretations, strengthening geological models, and ensuring each step of fieldwork meaningfully advanced the technical understanding of the system. Their disciplined approach reflects a commitment to building long-term value through careful planning rather than rushing into premature drilling.

Guiding Early-Stage Discovery with Discipline

Dryden Gold’s leadership emphasizes a methodical, data-first approach to advancing the Elora Trend. November’s structural work wasn’t just field progress — it was a deliberate step toward building a strong technical foundation for future drilling.

Focused on Long-Term Value

Rather than rushing into aggressive drilling, the team is prioritizing structural clarity, continuity mapping, and evidence-based targeting. This strategy is designed to maximize discovery potential while reducing technical risk.

“November’s results sharpened our understanding of the Elora system,” leadership notes.

“Every added layer of structural detail helps us design smarter, more precise drill campaigns.”

Positioned for the Next Phase

With new priority zones now defined, Dryden Gold is preparing for targeted exploration that aims to test deeper structures, refine continuity, and expand the trend’s regional footprint.

“We’re building Elora the right way — step by step, with the geology leading the path forward.”

Trey Wasser

CEO & Director of Dyden Gold Corp.

COPPER & PORPHYRY FOCUS

November Momentum Across District-Scale Systems

High-Grade November Sampling

Arras advanced its Elemes Project with November drilling that expanded mineralization at Berezski Central, confirming broad copper–gold intervals and reinforcing the porphyry system’s footprint. Results highlight strong structural continuity and further growth potential across the trend.

Key Snapshot

- Mineralization extended along strike
- Strong Cu–Au porphyry characteristics observed
- System remains open for expansion
- Supports district-scale potential

Kodiak Copper, Strengthened Market Positioning

Kodiak Copper announced a new capital markets engagement to enhance visibility ahead of the upcoming 2025 MPD Resource Estimate. November’s update reinforces confidence in MPD’s multi-zone porphyry system and sets the stage for stronger market communication.

Key Snapshot

- Multi-zone MPD porphyry system
- 7 identified mineralized zones
- Resource estimate approaching
- Heightened investor engagement

NOBLE PLAINS URANIUM

NOBLE PLAINS
URANIUM CORP

Leadership Shift Marks a New Phase for U.S. Uranium Growth

New CEO Appointment

Noble Plains Uranium appointed Drew Zimmerman as CEO, shifting Paul Cowley to COO. This leadership reset signals a stronger strategic focus on advancing U.S.-based ISR uranium assets and accelerating technical execution across the company's development pipeline.

Advancing Toward Wyoming Drilling

The company continues preparing for drilling at its Duck Creek Project, with final permits pending. November's update highlights ongoing commitment to growing its uranium pipeline at a time when domestic supply security is becoming increasingly critical.

Strengthened Technical Direction

Cowley's move to COO enhances geological leadership, supporting disciplined exploration planning and driving efficient progress across Noble Plains Uranium's upcoming project phases.

Project Snapshot — Duck Creek

ISR-amenable U.S. uranium project

Efficient ISR design supports modern, lower-impact uranium extraction in Wyoming.

Final drill permits pending

Project awaits final permits before initiating planned drilling activities.

Strong geological foundation

Sandstone-hosted horizons provide reliable groundwork for future resource definition.

Positioned within a resurging U.S. uranium market

Rising domestic uranium demand strengthens Duck Creek's strategic development importance.

CEO SPOTLIGHT

A Strategic Leadership Shift

November marked a pivotal moment for Noble Plains Uranium with Drew Zimmerman stepping into the CEO role. His appointment signals a sharpened focus on advancing ISR-amenable uranium projects in Wyoming’s resource-rich landscape.

Driving the Duck Creek Vision

Zimmerman brings an execution-driven approach, emphasizing efficient permitting, disciplined technical planning, and alignment with America’s push for secure domestic nuclear fuel sources.

“We’re focused on rapidly progressing projects that strengthen U.S. uranium independence,” Zimmerman notes.

Strengthening Technical Execution

With Paul Cowley transitioning to COO, Zimmerman now leads a complementary executive team—strategic leadership paired with deeper geological oversight—positioning Noble Plains for an effective 2024–2025 exploration ramp-up.

“Technical clarity and steady progress will guide every decision we make,” he adds.

Why His Leadership Matters

As uranium demand surges alongside national energy policy shifts, Zimmerman’s forward-leaning guidance places Noble Plains in a strong Duck Creek sponsi-

Drew Zimmerman

President, CEO & Director of Nobel Plains Uranium Corp.

DIGIPOWER X DIGIPOWER X

November Marks a Transformational Shift Into AI Infrastructure

Record Liquidity & Financial Strength (Nov 3)

DigiPower X reported a major liquidity jump to \$85 million, driven by stronger digital asset positions and improved cash flow. This financial strength supports the company’s accelerated transition into Tier III AI data-center development.

Positive Q3 Earnings & Operational Momentum (Nov 13)

For Q3, DigiPower X delivered positive net income, boosted its Bitcoin and Ethereum holdings, and began assembling its first ARMS 200 Tier III AI pod—a key milestone in its AI-compute strategy.

Expanded Market Capacity (Nov 18)

The company filed an amended ATM prospectus, allowing up to US\$200M in subordinate voting share issuance to fund future AI infrastructure growth.

Leadership Compensation Alignment (Nov 19)

1.43 million options and 700,000 RSUs were granted to key team members, reinforcing long-term alignment as DigiPower X scales its AI and energy-compute platform.

Project Snapshot — DigiPower X November

November marked a major turning point for DigiPower X as the company accelerated its transition into a full-scale AI infrastructure provider. Backed by strengthened liquidity, rising digital asset holdings, and expanding power capacity, DigiPower X positioned itself at the intersection of energy, compute, and next-generation data-center development. With its first ARMS 200 Tier III AI pod underway and multiple U.S. sites advancing, the company’s November updates reflect a clear strategy aimed at rapid growth through 2026 and beyond.

Liquidity exceeded \$85M by end of month
November closed with a significantly strengthened balance sheet, fueled by cash, Bitcoin, Ethereum, and deposits—giving the company one of its strongest liquidity positions to date.

First ARMS 200 AI pod assembled
DigiPower X began assembling its first Tier III-certified ARMS 200 modular AI pod, marking a major milestone in its shift from traditional compute to high-density AI infrastructure.

Additional 60 MW power approval in New York
A newly approved load study added 60 MW of available power capacity, bolstering the company’s ability to scale future AI-ready data-center sites across the region.

Strengthened BTC + ETH positions
The company expanded its digital asset holdings during November, increasing both Bitcoin and Ethereum positions, further improving liquidity and long-term treasury strength.

Positioned for aggressive 2026 AI rollout
With capital, power capacity, and modular AI hardware aligned, DigiPower X is set to accelerate its transition into Tier III AI infrastructure through 2026 and beyond.

CEO SPOTLIGHT

A Vision Aligned With Rapid Transformation

November showcased Michel Amar’s decisive leadership as DigiPower X accelerated its shift from traditional compute operations into advanced Tier III AI infrastructure. Under Amar’s direction, the company strengthened its financial foundation, expanded digital asset holdings, and began assembling its first ARMS 200 AI pod—setting the tone for a new era of high-density data-center growth.

Strategic Growth Through Power + Compute

Amar has emphasized securing power capacity as the cornerstone of DigiPower X’s long-term strategy. November’s additional 60 MW approval in New York reflects this focus, paving the way for scalable AI-ready sites across multiple states.

“Power is the new currency in AI infrastructure,” Amar notes. “Our job is to control it, optimize it, and build the hardware ecosystems that put it to work.”

Financial Strength Supporting Acceleration

With liquidity surpassing \$85 million and digital assets continuing to grow, Amar is leveraging financial momentum to support a robust 2026 rollout of modular, Tier III-compliant infrastructure.

“We’re building a company designed for speed, efficiency, and long-term value creation,” he adds.

Why Amar’s Leadership Matters

As global demand for GPU compute surges, Amar’s forward-thinking, capital-efficient approach positions DigiPower X at the front of a rapidly evolving industry—merging energy infrastructure with next-generation compute.

Michel Amar
CEO of DigiPower X

ENERGY & COMPUTE SHIFT

The New Frontier

November highlighted a powerful trend: mining companies are rapidly evolving into energy-compute operators. With growing power capacity, industrial land, and infrastructure already in place, miners are uniquely positioned to support Tier III AI data centers, GPU clusters, and large-scale digital operations as demand accelerates.

November Standouts

DigiPower X Expansion	ARMS 200 Progress	USDC Site Strategy	Energy-Compute Synergy
Added 60 MW of new power capacity in New York, strengthening its AI-compute infrastructure roadmap.	Successfully assembled its first ARMS 200 Tier III AI pod , marking a key milestone in modular data-center deployment.	US Data Centers advanced efforts to convert former mining properties into scalable AI hubs with strong power access.	The month reinforced how industrial land, energy capacity, and compute infrastructure now combine to create major competitive advantage.

Rising Integration

Mining and AI compute integration accelerated significantly across multiple companies throughout November.

Energy Advantage

Energy capacity now determines competitive advantage for firms advancing large-scale AI infrastructure.

Sector Leaders

DigiPower X and USDC emerged as leaders driving the energy-compute transformation forward.

Power as the Core Asset

Mining companies with established power infrastructure gain an edge in the AI era, enabling rapid deployment of modular, high-density compute facilities.

Industrial Sites Reimagined

Former mining and processing locations now serve as ideal hubs for AI infrastructure, offering zoning, grid access, and scalability traditional tech developers cannot match.

ENERGY & COMPUTE SHIFT

GOLD — November Metrics

- Monthly Price Trend (%): +2.1 (Moderate upward movement)
- Volatility Level: Low (Stable month with limited swings)

COPPER — November Metrics

- Monthly Price Trend (%): +1.4 (Moderate upward movement)
- Volatility Level: Medium (Influenced by macroeconomic signals)

URANIUM — November Metrics

- Monthly Price Trend (%): +3.6 (Continued strong upward push)
- Volatility Level: Medium-Low (Steady interest, limited pullbacks)

PROJECT WATCHLIST

Five Standout Projects to Watch After November

CK Gold Project — U.S. Gold Corp

November brought strategic land expansion, strong investor engagement, and clear momentum toward a 2026 construction start, reinforcing CK Gold as one of the most advanced U.S. gold–copper developments.

Perry Vein — Arizona Gold & Silver

A major 34.45m intercept confirmed the Perry Vein’s northward continuation. November’s results significantly expanded structural understanding and elevated the project’s regional importance.

Gold Rush Property —Loyalist Exploration

Surface samples reaching 7.36 g/t Au highlighted strong mineralization across a 150m trend, positioning Gold Rush as a highly prospective early-stage gold target.

Duck Creek — Noble Plains Uranium

With a new CEO in place and drilling permits pending, November positioned Duck Creek as a key ISR-focused U.S. uranium project ready for near-term advancement.

Elmes/Berezski Trend — Arras Minerals

November drilling expanded copper–gold mineralization and reinforced the footprint of this district-scale porphyry system, strengthening Arras’ visibility heading into 2025.

EXECUTIVE INSIGHT BOARD

What Industry Leaders Were Saying This November

Gold & Precious Metals

Luke Norman — U.S. Gold Corp

“November moved CK Gold closer to construction readiness and strengthened our development outlook.”

Mike Stark — Arizona Gold & Silver

“The Perry Vein’s latest step-out reinforces our confidence in its scale and continuity.”

Early-Stage Exploration

Errol Farr — Loyalist Exploration

“November’s samples confirmed meaningful gold potential across the Gold Rush trend.”

Uranium Leadership

Drew Zimmerman — Noble Plains Uranium

“We’re executing a clear, focused plan to advance our ISR assets efficiently.”

AI Infrastructure & Energy Compute

Michel Amar — DigiPower X

“Our November progress shows how energy capacity and Tier III infrastructure define the future of AI compute.”

GLOBAL EXPLORATION MAP

Where November’s Key Activity Happened

North America — PRIMARY ACTIVITY HUB

United States

Wyoming — Uranium

- Noble Plains Uranium
- ISR-focused development at Duck Creek
- Leadership shift + drilling preparation

Wyoming — Gold–Copper

- U.S. Gold Corp
- CK Gold advancing toward 2026 construction

New York — AI Infrastructure

- DigiPower X
- +60 MW power approval
- ARMS 200 AI pod assembly

Canada

Ontario — Gold Exploration

- Loyalist Exploration
- High-grade Gold Rush samples
- Dryden Gold
- Structural advancement on Elora Trend

International Highlights

Kazakhstan — Copper Porphyry

- Arras Minerals
- November drilling expanded Berezski Central
- Reinforced district-scale potential

1

Gold Zones

Nevada-adjacent U.S. regions, Ontario belts, and emerging vein systems in Arizona.

2

Copper Districts

Kazakhstan porphyry expansion + Canadian multi-zone systems.

3

Uranium Corridors

Wyoming ISR projects gaining momentum ahead of drilling.

4

AI-Compute Sites

New York & multi-state DigiPower X expansion.

NOVEMBER TRENDLINES

A Visual Breakdown of What’s Powering 2025

November revealed two accelerating forces shaping 2025:

metals strength fueled by new discoveries and development milestones, and AI–energy expansion driven by growing power capacity. Together, they set a clear trajectory—resource growth and compute infrastructure are becoming interconnected engines of industrial momentum.

METALS MOMENTUM

GOLD — Stability + Discovery

A resilient month supported by high-grade results and rising investor demand.

COPPER — Electrification Driver

Porphyry expansion in Canada and Kazakhstan strengthened long-term copper confidence.

Exploration Lift

↑72

Market Strength

↑74

Trendline Move

+1.4%

ENERGY & COMPUTE SHIFT

URANIUM — U.S. ISR Momentum

Wyoming projects advanced toward drilling, supported by strong policy tailwinds.

AI INFRASTRUCTURE — Power First Strategy

DigiPower X secured +60 MW and advanced Tier III pod assembly.

Policy Support

↑85

Project Progress

↑79

Trendline Move

+3.6%

SIDE RIBBON — KEY TAKEAWAYS

Metals Uptrend

Gold and copper strengthened through new discoveries, improving sentiment, and advancing North American development projects.

Uranium Lift

ISR momentum rose as U.S. nuclear policy aligned with domestic production priorities.

AI Power Surge

Growing energy capacity positioned AI-compute developers for rapid 2025 expansion across industrial sites.

PROJECTS TO WATCH

CK GOLD PROJECT: U.S. GOLD CORP

Why It Matters
Strategic land expansion and strong investor engagement pushed CK Gold closer to its **2026 construction window**. A rare U.S. gold-copper project that's fully permitted and development-ready.

Quick Pulse

- Advanced-stage buildout
- Strong PFS economics
- Clear permitting runway

PERRY VEIN: ARIZONA GOLD & SILVER

Why It Matters
A **34.45m intercept** confirmed strong northward continuity, validating structural modeling and widening the system's footprint. Significant upside remains open along strike and depth.

Quick Pulse

- Robust November hit
- 60m step-out success
- High structural confidence

GOLD RUSH: LOYALIST EXPLORATION

Why It Matters
Grab samples up to **7.36 g/t Au** confirmed a 150m gold-bearing trend, positioning this early-stage project for high-priority follow-up work.

Quick Pulse

- High-grade surface wins
- Expanding mineralized corridor
- Early advancement potential

DUCK CREEK: NOBLE PLAINS URANIUM

Why It Matters
With a new CEO and drilling permits pending, Duck Creek is positioned as a key U.S. **ISR uranium** asset ready for near-term action.

Quick Pulse

- Leadership realignment
- ISR-focused potential
- Permitting near completion

BEREZSKI TREND: ARRAS MINERALS

Why It Matters
November drilling extended copper-gold mineralization across the Berezski Central zone, strengthening Elmes as a **district-scale porphyry system**.

Quick Pulse

- Expanded mineralized footprint
- Strong porphyry indicators
- District-scale upside

TECH OF THE MONTH

Modular AI Pods: The New Industrial Engine

November proved that modular AI pods are becoming core infrastructure across mining-aligned energy sectors. With rising power capacity, industrial zoning, and scalable footprints, these units allow companies to deploy Tier III compute systems rapidly — transforming traditional mining regions into high-density, AI-ready technology hubs.

Feature Spotlight: ARMS 200 Tier III AI Pod

What It Is

A containerized, high-density compute pod designed for fast deployment, redundancy, and massive GPU hosting capability.

Why It Matters

November’s assembly of DigiPower X’s first ARMS 200 pod signaled a shift where industrial mining environments now double as AI-compute campuses.

Rapid Deployment Advantage

Modular pods bypass traditional multi-year data-center buildouts, allowing companies to activate scalable compute in weeks, not quarters.

Built for Power-Heavy Loads

Designed for GPU-intensive operations, these pods leverage existing industrial grid ties found in mining regions.

Energy Leverage

Mining infrastructure offers ideal power access for Tier III modular compute deployments.

Industrial Synergy

Redundant cooling, zoning, and land profiles match perfectly with AI pod requirements.

Future Growth

Modular systems accelerate expansion, enabling 2026 AI scaling across North America.

SAFETY & ESG CORNER

How Companies Aligned Operations With Modern Standards in November

November brought meaningful improvements in how exploration and development companies managed safety, community relations, and environmental discipline. With multiple projects preparing for drilling or construction transitions, teams placed stronger emphasis on field safety planning, low-impact exploration methods, and building trust with stakeholders while maintaining responsible progress across emerging resource hubs.

These November improvements highlight an industry steadily modernizing its operational responsibilities. Companies demonstrated that exploration success must be matched with safe execution, environmental care, and clear communication. As 2025 approaches, sustained ESG attention and thoughtful planning will play a decisive role in advancing emerging mining and energy-compute projects responsibly.

Field Safety Optimization

Exploration teams refined travel routes, improved communication protocols, and enhanced planning efficiency to ensure safer, smoother fieldwork across active November projects.

Low-Impact Exploration Methods

Operators prioritized reduced ground disturbance, using lighter equipment and targeted sampling schedules to meet environmental expectations and support upcoming permit applications.

Community & Stakeholder Alignment

Teams increased early-stage communication with local stakeholders, reinforcing transparency and building support as key projects moved closer to drilling or development milestones.

Stronger ESG Integration

Companies strengthened internal ESG processes by updating land-use reviews, refining environmental safeguards, and aligning operational goals with long-term sustainability commitments.

MARKET SENTIMENT REPORT

How Investors Reacted to November’s Mining & AI Moves

November sparked stronger investor interest across gold, copper, uranium, and AI-compute plays. High-grade discoveries, leadership changes, and major power-capacity additions shifted sentiment upward. Junior explorers saw renewed attention, while energy-compute companies pulled in fresh eyes as modular AI pods and power expansions became major 2025 catalysts.

Gold & Silver: Positive Momentum

Exploration wins and high-grade vein extensions boosted confidence in near-term value creation.

Copper: Strengthening Outlook

Renewable demand, porphyry expansion, and electrification trends kept copper sentiment steadily improving.

Uranium: Strongest Confidence

U.S. ISR momentum and supportive nuclear policies drove the month’s highest investor interest.

AI Infrastructure: Rapid Upside Interest

Power expansions and modular AI pod deployment pushed DigiPower X-type companies into tech-investor territory.

“High-grade gold still drives fastest reactions.”

“Copper is a long-term conviction play.”

“Uranium has real policy momentum.”

“AI power capacity = instant investor attention.”

INVESTOR SENTIMENT INDEX

LOOKING AHEAD

What December Could Bring for the Sector

December shifts the sector into preparation mode as companies finalize budgets, refine drill targets, and strengthen operational plans for Q1 2025. November’s momentum in gold, copper, uranium, and AI-compute sets a supportive backdrop, positioning several exploration and infrastructure projects for accelerated progress once the new year begins.

Strategic Alignment for Q1

December acts as the bridge between reporting and execution. Companies concentrate on aligning technical teams, reviewing permitting timelines, and ensuring all early-season logistics are in place. This quieter month establishes the foundation required for a more streamlined and productive exploration cycle in early 2025.

Operational Readiness

December is when teams strengthen the groundwork for upcoming field programs, finalizing drill schedules, refining access routes, securing contractors, and tightening supply logistics. This preparation ensures that once weather windows open and Q1 mobilizations begin, exploration crews can start efficiently, without delays, and maintain consistent momentum across active project areas.

Permitting Progress

With several gold and uranium projects approaching key milestones, December becomes a crucial month for advancing final regulatory steps. Companies review compliance documentation, complete outstanding environmental requirements, and prepare submission packages. These actions help secure approvals needed to launch drilling programs promptly in the first quarter, avoiding administrative bottlenecks later.

Infrastructure Planning

Energy-compute and AI-infrastructure developers use December to map out expansion timelines, review power agreements, and refine site plans for 2026 deployment. This includes assessing grid capacity, evaluating modular build-outs, and coordinating with local partners. These steps support long-term growth and ensure readiness for rapid infrastructure development once execution begins.

CLOSING THOUGHTS

Wrapping Up the November Edition

November delivered significant progress across gold, copper, uranium, and AI-compute projects, reflecting a sector that is quickly modernizing. High-grade discoveries, leadership transitions, and major technical advancements have set the stage for more decisive development activity in 2025.

Companies used November to strengthen their positions—whether through new land acquisitions, improved structural models, enhanced liquidity, or expanded power capacity. These moves reinforce a growing trend: exploration success today relies as much on strategic preparation as it does on technical results.

December will bring alignment and refinement. Teams are reviewing budgets, tightening drill targets, and preparing data for year-end reporting cycles. This quieter phase is essential, ensuring the momentum generated in November transitions seamlessly into actionable plans for the first quarter.

As operational, regulatory, and technological frameworks strengthen, Mining Discovery sees the industry entering a period of increased integration between mining fundamentals and advanced infrastructure. This convergence will shape discoveries, development timelines, and investment flows into 2025 and beyond.

CLOSING STATEMENT

At Mining Discovery, we believe the future belongs to companies that combine strong geology with modern execution—balancing exploration discipline, power access, digital infrastructure, and community alignment. The next era of mining will be faster, more data-driven, and deeply connected to global electrification and compute demands.

Discovery Acceleration

High-grade drill results and expanding structural zones will continue driving exploration momentum across major jurisdictions.

Energy Integration

Power access, grid upgrades, and AI-compute readiness are becoming core competitive advantages for modern operators.

Responsible Development

Safety, ESG performance, and transparent community engagement will remain essential to project approval and long-term value.

Digital Evolution

Modular pods, analytics, and real-time data systems will reshape how projects are planned, executed, and scaled.
